

CA-C30L: Mobile Application Development Lab

LAB PROGRAM-7 : MENU

7. Create menu in Application

Program description :

The program displays a menu with three options ,each when clicked a respective Toast ,message is displayed. For this a separate menu resource file is created ,where the items of the menu is populated. The activity.xml file has no changes while in the java file two menu methods are implemented to address the click functionality of menu items .

Note : In res/values/themes.xml , include the highlighted code for showing the menu

```
<style name="Base.Theme.Opt_Menu"
parent="Theme.AppCompat.DayNight.DarkActionBar">
```

Step 1 : Create a menu resource directory and menu xml file using following steps :

- i) Select **res**->right click ->**New->Android Resource directory**.
- ii) In the dialog box that appears ,give name as **Name** – menu and **Resource type** – menu
- iii) Select the newly created menu directory and right click->**New ->Menu Resource File**
- iv) Give the name **opt_menu**. An xml file by the name **opt_menu** is created

Step 2 : Type the following code in **opt_menu.xml**

```
<?xml version="1.0" encoding="utf-8"?>
<menu
xmlns:android="http://schemas.android.com/apk/res/
```

```
android"
xmlns:tools="http://schemas.android.com/tools"

tools:context="com.example.androidx1.MainActivity"
>

<item
    android:title="New"
    android:id="@+id/option1" />
<item
    android:title="Save"
    android:id="@+id/option2"/>
    <item
        android:title="Search"
        android:id="@+id/option3"/>

</menu>
```

Step 3: In activity_main.xml ,no changes except type the following for <textview>

```
android:text="Click on Menu"
```

Step 4: In MainActivity.java ,type the following highlighted code (override **onCreateOptionsMenu ()** method for inflating the menu and **onOptionsItemSelected()** method for writing actions for options selected.

Mainactivity.java

```
package com.example.optionmenu;
import androidx.annotation.NonNull;
import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.view.Menu;
import android.view.MenuItem;
import android.widget.Toast;

public class MainActivity extends
```

```
AppCompatActivity {

    @Override
    protected void onCreate(Bundle
savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

    }

    @Override
    public boolean onCreateOptionsMenu(Menu menu)
    {

        getMenuInflater().inflate(R.menu.opt_menu, menu);

        return true;
    }
    public boolean onOptionsItemSelected(@NonNull
MenuItem item)
    {
        int item_id=item.getItemId();
        if (item_id==R.id.option1) {
            Toast.makeText(this, "Opening new
file", Toast.LENGTH_SHORT).show();
            return true;
        }
        if(item_id==R.id.option2) {
            Toast.makeText(this, "Saving file",
Toast.LENGTH_SHORT).show();
            return true;
        }
        if (item_id==R.id.option3) {
            Toast.makeText(this, "Searching file",
Toast.LENGTH_SHORT).show();
            return true;
        }
        return
super.onOptionsItemSelected(item);
    }
}
```

Step 5: In AndroidManifest file include following attribute in <application> tag (for Light background with dark action bar theme)

```
android:theme="@style/Theme.AppCompat.Light.DarkActionBar"
```
